Vista/Server 2008 Installation Error [Fixed]
Posted by iowacdi - 2009/07/24 20:18

_____

In order to install AGWA2 on Vista or Server 2008 we've found that it's necessary to do the following to avoid the 2869 error code:

1) create batch file with the following line
msiexec /i setup_file_name.msi

2) right-click batch file and choose Run as Administrator

Note: Make sure the .bat file is in the same directory as the MSI installer package.

Note 2: If this didn't work you could try setting the Compatibility Mode to Windows XP SP2 by right-clicking the batch file and looking in the compatibility tab. Disable visual themes and Disable desktop composition might be helpful to have checked also.
